

Saturday, September 28, 2019
Sheraton Crescent Resort
Phoenix, AZ / 8am - 5pm

WWW.VACCINEEDUCATIONSUMMIT.COM

Tickets \$100 – Includes Lunch Buffet/Premiums with Lunch Program, pay at door or at VaccineEducationSummit.com

SATURDAY PROGRAM September 28th, 2019

7:00am-8:00am: Registration and Vendor Set-Up

8:00am-8:15am: Introductions and Welcome by Ernest Hancock and Irene Pi

8:15am -9:10am: Diane Douglas

Arizona Superintendent of Public Instruction 2015-2018

Diane Douglas has always been passionate about the American education system and has been actively involved in Arizona's education landscape for over twenty five years. Her interest started with her daughter's education and has continued with her grandson. Advocating and protecting parents' rights to direct the education of their children has been one of her highest priorities throughout her years of service.

As the leader of the Arizona Department of Education, former Superintendent Douglas was devoted to improving education in Arizona so that all Arizona's children have the opportunity to reach their goals in life and contribute as successful American citizens. She believes the only way to accomplish this goal is to return education to its original purpose - the acquisition of knowledge through a classical education. To this end she attempted during her tenure to bring the Hillsdale Barney Charter School standards to all the schools in Arizona.

Former Superintendent Douglas is proud to have served two terms on the Peoria Unified School District Governing Board, including two years as President of the Board. During her tenure she worked to advocate for the district's parents and taxpayers in delivering an excellent education to all of its students and oversight of taxpayers' dollars. She has also served on the Site Councils for two Peoria Unified schools and on the Board of Education for church education programs.

Prior to her advocacy and leadership in education issues, Superintendent Douglas graduated from Rutgers University and had a distinguished career as a financial expert for a variety of private sector firms.

9:10am -10:05am: Dr. Alan Palmer

Dr. Palmer is the founder and director of two national chiropractic professional societies.

He is a health and lifestyle coach and has spent over three decades studying various healing arts and natural treatment options for all kinds of acute and chronic health disorders. He utilizes strategies from the world of clinical nutrition, functional medicine, therapeutics and natural healing. He has an intense and passionate desire to educate the world about the benefits of a natural healthy lifestyle and seeks to identify and treat the cause of a person's disease or condition, not merely treat their symptoms.

He is the author of *1200 Studies*, a free eBook that is the most comprehensive scientific expose of vaccines to date. This research and reference tool contains excerpts from well over 1200 studies, written by thousands of scientists and researchers that contradict what we are being told by the vaccine industry and the media that they control. Published in a PDF format, it provides key word and phrase searching, links accessing each topic pages in the document from the table of contents and links in each subject topic to the original abstract or study online. These unique features make *1200 Studies* an invaluable resource for easily accessing vital evidence based information that will bring truth and clarity to this very contentious and controversial topic. **Web site is www.wellnessdoc.com**

The FREE eBook can be downloaded from www.1200studies.com

10:15am-11:10am: Jonathan Lockwood

Jonathan Lockwood is the executive director of Conscience Coalition. He has his master's degree in public relations from Georgetown University and earned his undergraduate degree in public relations at the Journalism school at Metropolitan State University of Denver. After working in music publicity for two years he worked on congressional campaigns and he's been the spokesman for over forty lawmakers and candidates, he's led nonprofits, participated in numerous fellowships including the Charles Koch Institute and the American Legislative Exchange Council (ALEC).

11:10am-12:00pm: Wayne Rohde

"Wayne Rohde has lifted the veil over the murky tort reform experiment known as the "Vaccine Court." In exposing the program's

imbalanced liability protection for powerful vaccine manufacturers, he has performed a valuable public service." —Robert J. Krakow, attorney and coauthor of *Unanswered Questions from the Vaccine Injury Compensation Program: A Review of Compensated Cases of Vaccine-Induced Brain Injury*

"Few Americans know about the US 'Vaccine Court,' yet it may be their only recourse if they suffer an adverse vaccine reaction. In this groundbreaking book, Rohde details how the 'court' works, or rather does not work, and the critical problems that bedevil it. Written with compassion and based on extensive research, Rohde's book is a must-read for all those concerned about the intended and unintended consequences of US vaccines."—Mary Holland, research scholar, NYU School of Law.

Wayne wrote *The Dark Truth of America's Vaccine Injury Compensation Program. A critical review of the National Vaccine Injury Compensation Program and the families desperately trying to navigate their way through it.* Website: <https://www.thevaccinecourt.com/>

12:00pm-1:20pm: LUNCH

1:20pm-2:15pm: Dr. Judy Mikovits

PhD in Molecular Biology; Biochemistry - Researcher; Author; Advocate for Health Education and Freedom. Webpage: <http://plaguethebook.com/>.

Dr. Mikovits earned her BA in Chemistry with a specialization in biology from the University of Virginia in 1980 and her PhD in biochemistry and molecular biology from George Washington University in 1992. Upon graduation from the University of Virginia, she went directly to the National Cancer Institute in Frederick Maryland where she developed purification methods for Interferon alpha. It was this interferon, which was used in the first immune therapy treatment for hairy cell leukemia in 1986. In 1986-7, prior to enrolling in graduate school, she went to Upjohn Pharmaceuticals in Kalamazoo Michigan to develop production methods to insure biological materials manufactured using human blood products were free of contamination from HIV-1. Her PhD thesis defense titled "Negative Regulation of HIV Expression in Monocytes" changed the paradigm for therapeutic treatment of HIV. For this work, she was awarded the graduate student of the year in 1991.

In 2001, Dr. Mikovits moved back to industry where she developed multiplex diagnostic epigenetic and proteomics expression technologies for the prevention and treatment of Cancer and prediction of Immune Related Adverse Events to chemotherapy/immune therapy in susceptible populations.

In 2006, she became attracted to the plight of families with neuroimmune diseases including myalgic encephalomyelitis/Chronic Fatigue Syndrome (ME/CFS) and Autism Spectrum Disorders (ASD). Dr. Mikovits co-founded and developed the first neuroimmune translational research institute dedicated to understanding the pathophysiology and treatment of Neuroimmune diseases [ME/CFS, ASD, Parkinson's Disease (PD), Neuroborreliosis/Chronic Lyme Disease (CLD), Alzheimer's Disease (AD), Multiple System Atrophy (MSA) among

others]. In five short years, Dr. Mikovits won more than 6 million dollars of NIH/DOD competitive funding in grants and contracts for this program demonstrating the relationship between environmentally acquired immune dysfunction, chronic inflammation and these diseases.

Her pioneering work during her twenty-year career at the National Cancer Institute includes the discovery of the modulation of DNA methylation machinery by human retroviral infection and the

development of the concept of inflammatory cytokines and chemokine signatures of infection and disease, which was first published in 1999, when she directed the Laboratory of Antiviral Drug Mechanisms in developing therapeutics and diagnostics for HIV/AIDS and AIDS associated malignancies. These are therapies that are still standard of care twenty-five years later and credited with saving millions of deaths from HIV/AIDS.

In her thirty-five-year quest to understand and treat chronic diseases, she has co-authored seminal papers culminating at least a decade of research in each of four fields: immunology, natural products chemistry, epigenetics, and HIV/AIDS drug development. In addition to more than 50 peer reviewed publications and book chapters, Dr. Mikovits holds patent # WO 2012061790 A1. "Combination Therapy for Prostate Cancer using Botanical Compositions and Bicalutamide" and authored the book, *Plague*.

The formation of M.A.R.C. Inc. in 2016 with colleague, Dr. Frank Ruscetti, has afforded Dr. Mikovits the opportunity to come full-circle back to her first love, natural products chemistry. M.A.R.C. Inc. is a consulting company focused on education for prevention and treatment autoimmune/auto-inflammatory diseases resulting from drugs and environmental toxins. Her heart and passion is to focus on natural products chemistry and plant based drug therapies. Her current focus is on medical cannabis with breakthroughs in understanding of the pathophysiology of neuroimmune diseases as acquired endocannabinoid immune dysfunction (AEIDS).

2:15pm-3:10pm: James Lyons-Weiler

Dr. James Lyons-Weiler is a biomedical research scientist with expertise in genetics, disease and treatment biomarkers. As a faculty member in the Departments of Pathology and Biomedical Informatics at the University of Pittsburgh, Dr. Lyons-Weiler taught full courses and as a full faculty member helped Dr. Ronald Herberman and faculty in the University of Pittsburgh Cancer Institute procure over \$27 ½ million in collaborative grant funding surrounding biomarkers for cancer diagnosis and prognosis. He founded the Commonwealth's first Bioinformatics Analysis and designed and directed the analysis of over 100 basic, translational and clinical research studies. He has authored three books on very important topics such as *Ebola: An Evolving Story*, *Cures vs. Profits* and *The Environmental and Genetic Causes of Autism*. The founder of the Ebola Rapid Assay Development Consortium, he is now the CEO and Director of the Pittsburgh-area Institute for Pure and Applied Knowledge, a pure public charity focused on reducing human pain and suffering. IPAK has just launched the

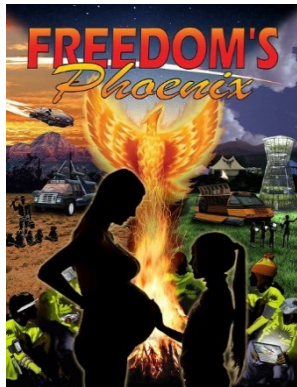

new journal “Science, Public Health Policy & the Law, which publishes articles focused on the accuracy with which science is translated into public health policy. Websites:
